35. A system for recording information regarding telephone calls with three or more participants and comprising one or more telephone call segments, comprising:

(a) a first memory having one or more locations storing audio data of telephone call segments;

(b) a second memory having one or more locations storing data regarding telephony events associated with telephone call segments; and

(c) a processor programmed to:
(i) identify telephone call segments that relate to the same telephone call, and

(ii) construct data representations of lifetimes of telephone calls that have three or more participants, wherein said data representations are constructed using data regarding telephony events associated with telephone call segments.
